ExeSie for Windows is a light application that enables you to easily encrypt/decrypt/exchange information. It's not as power as other similar applications that provide multiple options for data exchange, but it's a great choice if you need a solution for your privacy needs and don't want to wait a long time to be able to interact with your info. Light, easy-to-use interface Installing ExeSie is a quick and painless job, since it takes advantage of standard Windows procedures. Plus, it uses the default Windows icon that makes it instantly recognizable on your desktop. As far as the interface is concerned, ExeSie has a minimalistic design and layout, where the settings and options are rendered in a compact box. The global hotkey is used to encrypt and

decrypt text, while you can change the language in order to suit your needs. Open content You can choose to access your information, encrypt or decrypt it, copy it to the clipboard, send it to a friend, or view it in the form of a text file. The main window consists of two sections, where the options and settings are placed. In the bottom part, you have the local settings, where you can change the default settings of the tool and save your own ones. Seamlessly exchange data There are three distinct areas in ExeSie where you can enter text, enter a password, and get the information you've encrypted or decrypted. After typing or pasting it, you can enter a password, click a button, and get content encrypted or decrypted. The application uses a low amount of CPU and RAM, and it doesn't hog system resources, but it doesn't receive updates and doesn't work properly on newer

Windows editions. In our case, it displayed an error message that prevented it from starting up. Evaluation and conclusion ExeSie is a user-friendly and powerful tool with a transparent and easy-to-use interface. In addition, it has multiple options for exchanging encrypted data with other users. However, the configuration process can be tricky if you have no experience with similar applications, and the software offers no support for printing data, but there's a note that says it will be implemented in a future version.
