User-defined functions (UDFs) are written in Visual LISP or AutoLISP and can be used for many purposes. UDFs must be recompiled for each version of AutoCAD they are used in. History AutoCAD was originally written in 1986 for the IBM PC and sold on diskette (typically in the retail price range of \$1,000 to \$1,500), which could only be loaded into an IBM PC-compatible computer using a special diskette drive. Once loaded, AutoCAD could be run in a "batch" mode by pressing the Start button on the keyboard. The user would load the drawing into the computer and then click Start. The entire drawing would be displayed, requiring the user to manually enter commands, specify points, and so on to complete the drawing. For most people, this was much too slow for a full production drawing. Release history AutoCAD 2000 released on August 24, 1999, with 8.0.4 support of AutoCAD R15. The first version to support x64 architecture. AutoCAD 2000 included over 1,500 new drawing and modeling commands, plus a complete user interface that was much easier to use. The AutoCAD 2000 license required users to purchase a \$1,200 per-seat software maintenance agreement, but AutoCAD 2000 came bundled with a \$1,200 per-seat software maintenance agreement and 24 months of updates, enabling AutoCAD users to upgrade themselves from version 8.0 to 2000 without incurring any additional fees. Prognosis for patients with incidental hilar bile duct cancer detected by computed tomography scan. To clarify the prognosis for patients with incidental hilar bile duct cancer, we investigated the clinicopathologic features of patients who underwent surgery for hilar bile duct cancer. Between March 2002 and December 2008, patients with an incidental hilar bile duct cancer detected by computed tomography (CT) scan underwent curative resection. Pathologic features and survival outcomes were assessed. Seventy-two patients (38 males, median age 66.0 years) underwent resection. Patients with clinical stage III-IV disease or lymph node metastasis had poorer overall survival (OS) than those without ($p = 0.02$). There was no difference in OS between patients with perihilar and distal bile duct cancer. Of the 11 patients with pN1/2 disease, three (27%) had no lymph node metastasis. Six patients (8%) had recurrence and these patients had poorer OS than those without recurrence ($p = 0.01$). Distant recurrence occurred in four patients (44%), two of whom (22%) had lymph node metastasis. Hilar bile duct cancer detected by CT scan has a good prognosis. Patients with lymph node metastasis may be cured by surgery alone.

Q: using split method in java to split a list into an arraylist I am using split method to split a list into an arraylist. The problem is that i dont know how to set the delimiter for this method to split it. I tried "," and " ", but i always get this error : The constructor ArrayList(String[]) is undefined I can split the list using a for each loop and the delimiter is ",", but i think that there is an easier way to do this, any ideas? A: ArrayList (and other) classes do not have a constructor which takes a String[] as argument. They are built to take a Collection and create an ArrayList. That constructor has a set of types you may be
